HIGHLIGHTS
- Environment and tools for custom restaurant application development
- Highly reliable system w/ best-in-class restaurant capabilities built in
- Built-in internationalization capabilities for currency, language, character sets, tax, and government regulation
- Centralized data management, deployment and application support
- Global remote support process

SUCCESS FORMULA
Unique Platform Architecture
Plus: Deep Domain Expertise
Minus: Tough Lessons Learned The Hard Way

= MW:APP

ARCHITECTURE OVERVIEW

Applications / G.U.I / External Applications

F/C Register(s)	D/T Register (s)	Store Dashboard	Customer Order Display	Kitchen Display (s)
Handheld Ordering	Customer Kiosk	Automated Equipments	External Order Entry	Others

HTTP Server

MOD_MWAPP	Server	Event Controller

Business Components (Logic)

POS Control	Sale Control (Transactions)	Event Manager	Time Clock	Peripheral Manager (0-n)
Accounting	Tax Calculator			Alert Engine
				Kitchen Production
Pluggable Security / Access	I18N	Persistence Logic	Report Engine	KDS Logic

Hypervisor

Process Control	Process Monitoring	Service Locator	Locator Replication	License Manager
Startup Shutdown	System Logger	Inter Process Comm.	Database Manager	External Replicator

Applications / G.U.I
- Thin or thick client
- Enables highly tailored user experiences
- REST protocol communication

External Interface / HTTP Server
- Standards based external communication (Apache)

Business Components / Logic
- Implements the complete application logic
- Specialized development platform
- Built in best-in-class restaurant functionality

Hypervisor
- Highly portable, tech agnostic & standards-based
- Processes management and monitoring for highly reliable design and failover capability
